EARLY-CAREER SYSTEMS ENGINEERING | SOFTWARE INTEGRATION & TEST

PROFESSIONAL SUMMARY

Computer Science graduate with an A.S. in Engineering Science and hands-on experience building, integrating, testing, and troubleshooting computer and software systems. Experience includes computer repair, layered applications, cloud databases, system testing, and Python-based optimization research. Seeking an entry-level systems engineering, integration and test, software systems, or related technical role.

EDUCATION

Queens College, CUNY — Queens, NY

Bachelor of Arts in Computer Science | Summer 2026

Queensborough Community College, CUNY — Bayside, NY

Associate in Science in Engineering Science

Relevant Coursework: Computer Architecture, Operating Systems, Software Engineering, Machine Learning, Data Structures and Algorithms, Circuit Analysis

TECHNICAL SKILLS

Systems and Testing: Software Integration, Unit Testing, System Testing, Troubleshooting, Technical Documentation, Database Integration

Machine Learning: Random Forests, Bayesian Optimization, Gaussian Processes, Expected Improvement, Model Testing and Evaluation

Programming: C++, C, Python, Java, JavaScript, SQL, MIPS Assembly

Databases and Cloud: MySQL, MongoDB, AWS RDS, Render

Tools: Git, GitHub, Maven, JDBC, Node.js, Express.js, React, REST APIs, OAuth 2.0, Groq API, OpenAI API

RESEARCH & ENGINEERING PROJECTS

Bayesian Optimization for Dynamic Mobile Observer Coverage

Python, Gaussian Process, Expected Improvement | Queens College, CUNY

- Developed a Python-based Bayesian Optimization pipeline using Gaussian Process modeling and Expected Improvement to optimize mobile-observer coverage strategies.
- Evaluated the approach across NYC Taxi, Seattle 911, and T-Drive Beijing datasets and presented the methodology and findings to faculty.

Diabetes Prediction System

Custom Random Forest, Object-Oriented Design, Unit and System Testing

- Collaborated with a three-person team to design a layered prediction application with separate user-interface, prediction, and data-processing components.
- Implemented a custom Random Forest classifier, CSV data ingestion, component integration, and unit and system testing.

CHAD Query Submission System

Java, MySQL, AWS RDS, Maven, JDBC

- Designed a menu-driven Java application supporting SQL query submission across three user roles.
- Configured a MySQL database on AWS RDS with schema design, JDBC connectivity, and role-based workflows.

AI Meal & Fitness Planner

Node.js, Express.js, MongoDB, Groq API, Render

- Designed and deployed a web system integrating Node.js, Express.js, MongoDB, a user interface, and an external LLM API.
- Implemented authentication, personalization, CRUD plan management, JSON processing, and persistent session storage.

LEADERSHIP & WORK EXPERIENCE

Dojo Instructor — Purple Dragon International Dojo| July 2019–Present

Queens, New York

- Lead structured classes for students ages 5–50+ while communicating procedures, expectations, and performance feedback.
- Coordinate schedules and adapt instruction to different experience levels and learning needs.

Private Tutor — Self-Employed| November 2022–Present

- Teach mathematics, science, and programming by translating complex concepts into clear, structured steps.

Computer Technician — Self-Employed| March 2020–November 2020

- Built, repaired, and upgraded desktop computers for clients, diagnosing hardware and software issues and testing completed systems.
- Installed, configured, and troubleshoot home security camera systems at client residences.

Construction Worker — Badal Enterprises LLC| August 2021–July 2024

New York, New York

- Completed construction projects requiring precise measurements, calculations, and real-time troubleshooting.
